Some Volvo models require an additional readout process prior to tuning:

# READ THE CAR

**Step 1:** Connect a battery charger to your car
(This reading procedure can take up to 8 hours, therefor it's important to maintain a healthy battery charge)

**Step 2:** Turn the light switch to the position with the least intensity

**Step 3:** Put the key into the ignition and press the ignition switch until all dashboard lights appear, do not touch the pedals

**Step 4:** Connect the iSoftloader with the OBD2 port and press enter (the following process can take up to 8 hours)

**Step 5:** The iSoftloader is finished reading when you receive the message "disconnect and please sync with the rica server"

**Step 6:** Connect the iSoftloader to the PC and run the iSoftloader sync program

**Step 7:** Proceed as usual as stated in the iSoftloader manual
